Single control panel for USB and serial ports in the network

FlexiHub is software that enables shared access to all USB and serial ports in the network. You can access a remote USB port over network in an easy and convenient way - as long as the computers have FlexiHub installed on it. You can use contents and functionality of a USB device as if it were inserted directly into your local machine.

The solution is cross-platform, it works equally well on macOS, Windows, Linux, and Android.

Benefits offered by FlexiHub

- **Access USB and serial ports remotely**

FlexiHub allows accessing USB or serial devices plugged into network computers listed as nodes. It does not matter where they are located physically - in the next cubicle or across the globe.

- **Connect and disconnect to USB and serial devices**

Not only you can access devices, you can also manage them remotely. Your physical presence is not required. It is totally safe to do it - thanks to use of encrypted communication protocol.

- **Detect device type automatically**

Once you insert a device, FlexiHub automatically detects its type and displays it - a phone, a storage device, a camera, etc. This makes it easier to identify what device you need to access. Serial devices are marked with a special indicator to differ them from USB devices.

- **Control access to devices**

You can restrict access to devices connected to your computer via USB or serial ports. Such devices will not be listed as accessible to other computers, and only authorized users will be able to access them.

- **Invite another accounts to access your devices**

FlexiHub lets you invite other account owners to connect to devices hosted on your nodes. In that way, you may share your devices not only inside your own account but with the other FlexiHub users too.

Highlights of the technology employed by FlexiHub:

- Unique sharing mechanism: USB or serial ports can be shared and accessed over network from anywhere.
- Secure data transfer: 2048-bit SSL encryption makes it completely safe to use the application.
- Private communication server: this means that your computers do not need a real IP address to share and access data.
- Data compression: this reduces traffic consumption and increases the speed of working with certain devices.
- Access control: you can restrict access to devices plugged into your local machine, so only authorized users can use it.

FlexiHub pricing

To know more about FlexiHub pricing, visit <https://www.flexihub.com/prices/>

Personal Use

Personal subscription starts at \$159.99 per one connection, a user may customize the plan and choose a number of connections.

Working in Teams

Team subscription starts at \$29/month per member. The team administrator can assign multiple team members within the Team account and set up the max number of connections for each of them, see: <https://www.flexihub.com/team-subscription/>

FlexiHub supports

- Windows XP/2003/2008/Vista/7/8/10, Server 2012/2016/2019;
- macOS 10.9 - 10.15;
- Linux - Tested on Ubuntu 14.04 - 18.04; CentOS 7;
- Android 5.0 and above.
